

Join the High-Tech World of SOG®

Specialty Knives and Tools.

The human eye can distinguish the essential from the non-essential;
the aimful from the arbitrary.

The beauty of any SOG® design is in its purpose!

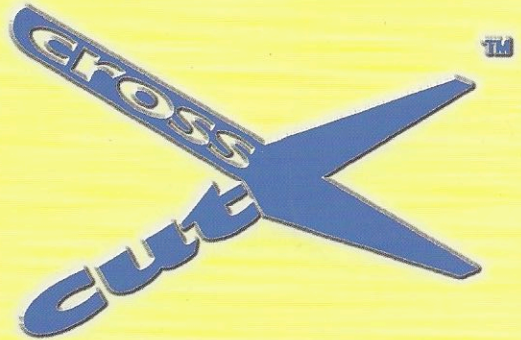

Cuts through
cardboard, leather
or electrical wire!

Life size
CrossCut™

It is in this spirit we create the Crosscut™, a multi-purpose tool with 11 everyday essentials for life's little chores and some big ones too! The Crosscut™ is a precision instrument for cutting, for personal care, for the unexpected, and is the smallest compound leverage scissor ever devised. Open the handles of this micro machine and a spring loaded scissor appears ready to work.

SOG®'s gear driven compound leverage allows cutting power to truly be miniaturized. Known mostly in the trades, this mechanical advantage provides increased power and makes cutting easier. With each snip, the Crosscut™ will bite 1.3" out of paper, cardboard, and even some heavy wirea significant achievement in compact performance!

SOG® takes the extra step in every detail. Hex bolt construction has become our trademark, enabling a user to adjust, dismantle, or customize their Crosscut™. You will appreciate the advantage of full sized tweezers, small and medium screwdrivers, bottle opener, nail file, pick, knife blade, lanyard loop and rulers.

The CrossCut™ is easy to use, powerful, and fun.
Wait until you feel the action!

SOG® CrossCut™ - CC50
Length: closed 2.5" open 4."
Width: 0.9" Thickness: 0.4"
Weight: 1.7oz
All Stainless Steel Construction
Available Fall 97

We have taken the skin from the Stealth Bomber and fused it with the finest custom steels to launch the JetEdge series and Mini-Gentleman as the next generation of SOG folding knives.

Mini Gentleman SOG®

SOG's smallest pocket knife is modest, yet distinctive and will quietly complement those who want lightweight simplicity. The Mini-Gentleman shape is slim lined and lends itself to the most comfortable pocket carry. A drop point AUS 8 stainless steel blade offers superior edge holding. Within the natural shape of the blade a purposeful nail slot makes opening simpler than other designs.

The Mini - Gentleman SOG presents simple, clean lines coming together with hightech materials in what we feel is the ideal pocket companion.

Also available with a brushed stainless steel finish.

Mini-Gentleman™ - C33	Mini-Gentleman™ - M33
Blade: 2"	Blade: 2"
AUS-8A Stainless Steel	AUS-8A Stainless Steel
Overall: 4.6"	Overall: 4.6"
Handle: Carbon Fiber	Handle: Stainless Steel
Weight: 0.7 oz	Weight: 1.5 oz

JetEdge™

These fascinating and stylish hybrid folding knives combine a liner type lock, ATS 34 steel, carbon fiber handles, and an unmistakable SOG evolution on blade design.

Carbon fiber laminates were developed for the aerospace industry which required maximum strength to weight ratios, high tensile properties and all weather durability. This combination lends itself to making an especially rugged and light-weight knife handle.

The half serrated ATS -34 blades of the JetEdge™ are surgically sharp. ATS-34 is considered to be a custom, quality stain resistant steel that exhibits excellent edge holding, toughness, and hardness.

Unlike any other blade design, the JetEdge showcases new grind lines along with a 'shark tooth tip' which generates exceptional point strength. SOG's preferred opening slot fits within the contours of the blade and provides quick one hand opening. A scalloped thumb rest increases downward pressure and offers delicate tip control for precision work.

These unique features combine to make the JetEdge™ one of the most advanced technical folders in the world today for the outdoorsman as well as the professional.

JetEdge 1 - J47
Blade: 3"
ATS-34 Stainless Steel
Overall: 7"
Handle: Carbon Fiber
Weight: 2.1 oz

JetEdge 2 - J48
Blade: 3.75"
ATS-34 Stainless Steels
Overall: 8.5"
Handle: Carbon Fiber
Weight: 3.5 oz

Gold TiNi Hardcased™ - T52
Standard Stainless Steel
Power Plier® S38
Length Closed: 4.25"
Open: 6.75"

Needle Nose Version: - N51
Available Fall '97

POWER Plier®

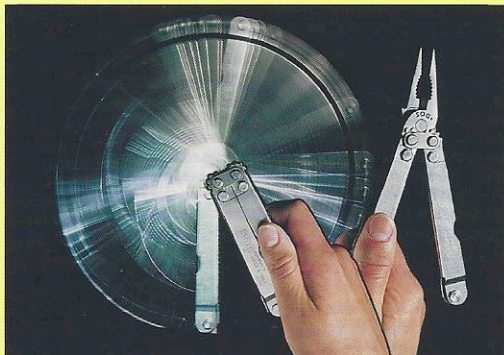

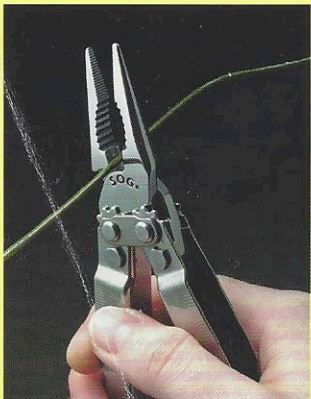

compound leverage

The SOG® Power Plier Gold Series is for those who search for the front line in experimental design. With its proven track record and innovative features, the stainless steel Power Pliers are considered by many to be the finest tool and cutlery design ever created. Now with the new TiNi Gold Hardcased™ finish, you can go where no one has gone before.

Titanium Nitrate coatings exhibit extreme hardness Rc 90 and are exceptionally tough, scratch and peel resistant, and virtually corrosion proof. Suited for sea or shore, heavy wear surfaces like the plier jaws, grippers, and wire cutters achieve superior life and performance with SOG TiNi Hardcased™ coatings. They also look great!

The Power Pliers are the only multi tools in the world that feature: compound leverage (which give twice the plier gripping and wire cutting strength than conventional design), quick one hand opening (like a butterfly knife), hex bolt construction (allows for interchangeability and adjustment). See main catalog for more details.

The Power Plier Series comes standard with several quality components. Choose from the light and sleek Pocket Power Plier which is equipped with 6 - 8 components or the original Power Plier with full size or needle nose plier head and 12 tool blade capability.

Standard Stainless Steel Pocket Power Plier® S44
Length Closed: 4" Open: 6"

TiNi AutoClip®

Made in
USA

When it was introduced several years ago the AutoClip® series was an innovative improvement in lightweight folding knives...it still is. It is the only knife line that creates attachment options through the use of an adjustable clip. This patented clip which is operated with a quickturn thumb wheel on the end of the handle allows the knife to be attached to a thick belt, a thin pocket edge or to be virtually 'locked on' for extended carry. It solves the problems of conventional clip designs. Now the AutoClip® is available with an optional Titanium Nitrate Hardcased™ finish.

TiNi AutoClip® - T36
Blade: 3.6" Straight or Serrated
440A Stainless Steel Rc 56-57
Overall: 8.25"
Weight: 2.6 oz

Mini TiNi AutoClip® - T39
Blade: 2.9" Straight or Serrated
440A Stainless Steel Rc 56-57
Overall: 6.75"
Weight: 1.5 oz

TiNi wear resistant coatings are the very best that can be put onto knife and tool products although previously they were too expensive. Now with SOG's Hardcased™ process our customers can afford the best. Our black colored TiNi coating has a surface hardness of Rc 90 and is exceptionally tough, scratch and peel resistant, and virtually corrosion proof.

With Hardcased™ coating of the cutting edge we are able to achieve significant increases in edge holding and life of the blade. Some machine tools such as end mills and drills have been coated with similar materials and are claimed to have 4-10 times the life.

MINI PENTAGON™

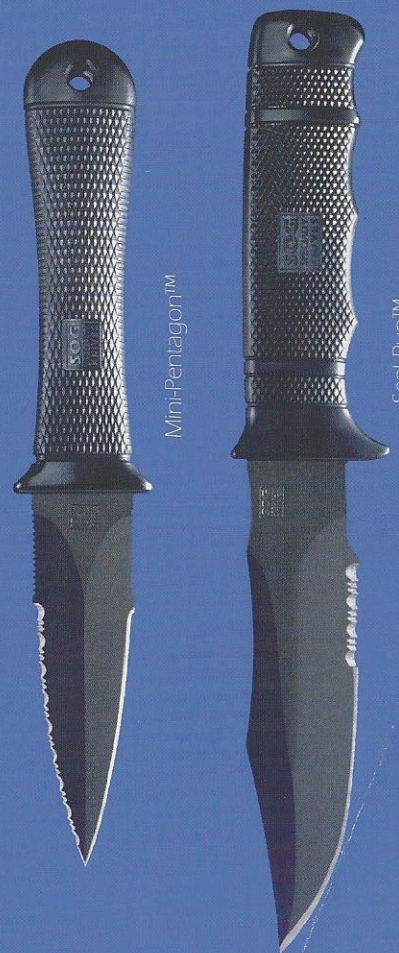

Serious multi edge capability has made the Pentagon™ one of the industry standards in fixed blade cutlery. We were the first to offer a production knife with this innovation. Now the designers at SOG® are offering the same format as the original, only sized down into a wonderfully compact package. Pick up the Mini-Pentagon™ and experience the sensational feel and balance.

Mini-Pentagon™ - M14
Blade: 3.5" x .125
440A Stainless Steel Rc 55-57
Overall: 7.75" Weight: 3 oz
Zytel Reinforced handle
Blade: Gray powder coated finish
Sheath: Black leather mounting clip

SEAL PUP™

Coming in the 'wake' of the SEAL Knife 2000™, the official Navy SEAL knife, this mini rendition features the same aggressive, partially serrated blade. The SEAL Pup™ was produced from consumer demand that requested the same awesome performance in a more easily carried format. It is stowable and makes for an excellent field companion on hiking adventures or night excursions.

Seal Pup™ - M37
Blade: 4.75" x .160
440A Stainless Steel Rc 55-57
Overall: 9" Weight: 5 oz
Zytel glass reinforced handle
Blade: Gray powder coated finish
Sheath: Ballistic Nylon

E-Clips™

E-Clips™ - S40
Blade: 2" Straight or Serrated
440-A Stainless Steel
Overall: 4.75"
Weight: 0.7 oz.
Available in Red, Yellow,
Green and Black

E-Clips™ are the smallest in the growing AutoClip™ Series. Presenting the function of fine design in a convenient size, the SOG® E-Clips™ can be carried by stationary clip, key ring, or in a pocket. Simple one hand opening and the choice of a beveled or a serrated blade make the E-Clips™ a stellar event.
